

ONE PLATFORM AND DASHBOARD FOR Multi-Location Management

The Alarm.com Enterprise Dashboard is a single, intuitive interface for real-time management of intrusion, energy, door access, and video systems across multiple business locations. Whether they are protecting just a few or hundreds of properties, administrators rely on Alarm.com for increased operational efficiency, enhanced security oversight, and all-in-one, full-premise protection.

EVERY LOCATION IN A SINGLE VIEW

Instead of managing locations separately, Alarm.com lets you organise them in a top-down hierarchy or into groups. It's easy to ensure that everyone has the right level of access, and to edit permissions when necessary in real time.

Organise your locations into a hierarchy of logical groups

Manage user codes/card access and system login permissions across groups

Globally add or revoke user codes/card access and system login permissions

Apply group-wide settings and rules to save time and increase consistency

REAL-TIME CONTROL OF EVERY LOCATION

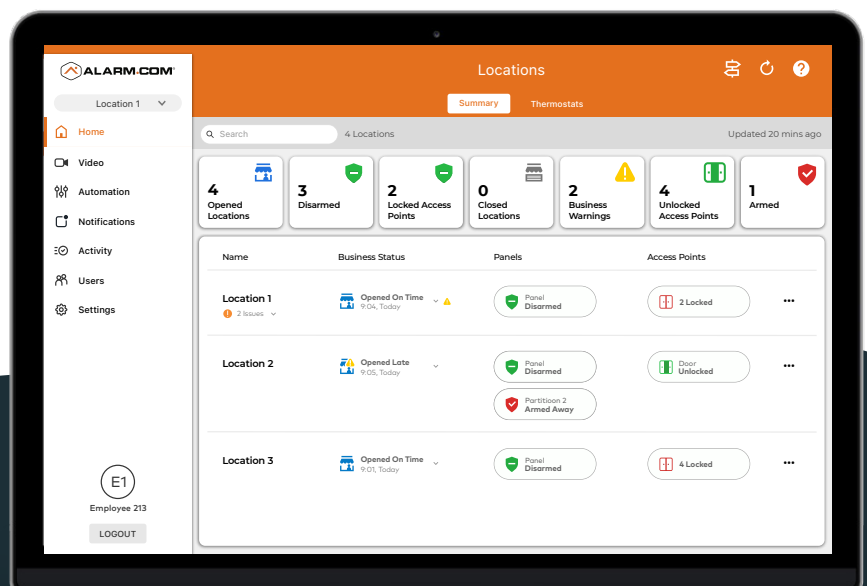

The Enterprise Dashboard gives you real-time control of alarm arming state, door locks & schedules, and much more for all of your business locations.

Arm and disarm alarm partitions

Lock and unlock doors at set times or in real time

Control light remotely or automate them based on the arming status

Access live or recorded video anywhere, anytime, across multiple locations

INVESTIGATIONS, REPORTING, AND AWARENESS

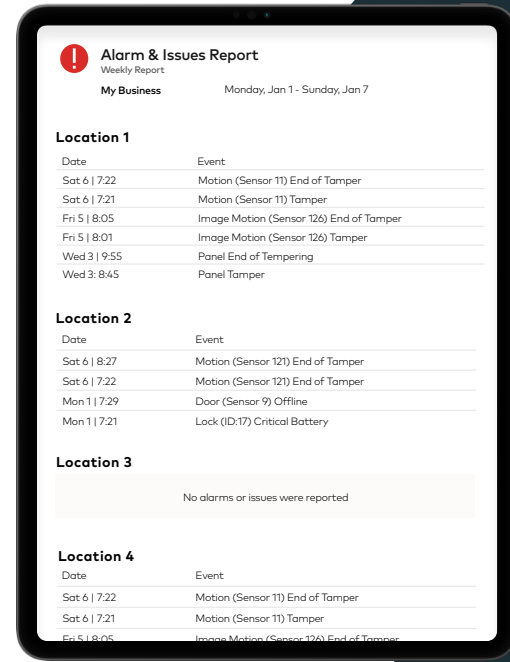

Get proactive notifications of abnormal activity. Find important events quickly in real time, or through scheduled reports.

Filter activity and access video clips of alarms, invalid door access attempts, arming actions, sensor activity, and more

Review and download recorded video footage from anywhere at anytime

View up to 12 months of event history, filterable & exportable

Schedule group activity summary reports for open/close times, temperature history of cooler/server room, door access summary, and more

DEPENDABLE MANAGED CLOUD SERVICE

Alarm.com is a managed service platform that supports millions of properties worldwide. Our 24/7 team works relentlessly to improve the software experience, maintain service reliability, and ensure always-up-to-date device firmware.

Automatic over-the-air device firmware updates & security patches

No local software to manage

24/7 health monitoring and alerts

BEST-IN-CLASS PLATFORM SECURITY

As a security platform, protecting customer data, devices, and traffic is paramount. Alarm.com uses state-of-the-art security and infrastructure practices to maximise protection and availability.

SOC II type 2 certified

End-to-end encryption

Dual path redundancy

Cellular encryption

New device login alerts
