

Home Security That Never Stops

Discover a new sense of security with a new type of system: expertly installed, customised for your home, professionally monitored, and controllable from anywhere.

TOTAL PROTECTION

Always on

Armed or disarmed, your system is on guard 24/7. Alarm.com alerts you to unusual activity and responds automatically to potential danger to keep you safe and secure.

Always monitored

In a break-in or fire, your professional monitoring service alerts your local police, fire, or EMS for you. If you can't call for help, they've got your back.

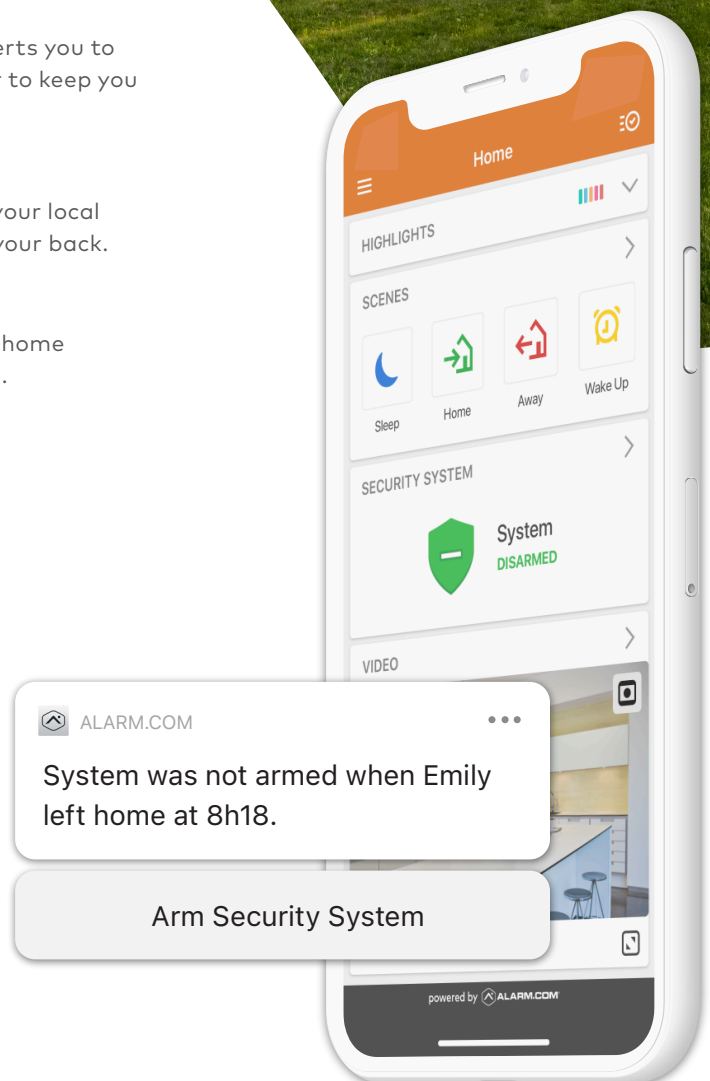

Always connected

Our all-in-one mobile app makes security, video monitoring, and home management easy. Home or away, you'll be aware and in control.

Smash-proof protection

You need security that can withstand a burglar's toolkit. Here it is.

Alarm.com's cellular connection can't be cut like a broadband cable. Our Crash & Smash technology can't be defeated with a hammer. No power? No problem.

Alarm.com connects your whole home into a single system to keep you safer. You can start small, or start with a complete system, expertly installed, and customised to your needs.

Simplify your security

Securing your house for the night should be easy. Our Scenes commands let you arm your security system, lock your doors, and adjust your lights with one touch.

Know when you forget

Did you leave home without turning the alarm on or locking the door? Your system will let you know. Just tap your alert to secure your home remotely.

See what's happening

Whether you're out grabbing groceries or in your home office, you'll have eyes on important activity with indoor, outdoor, and video doorbell cameras.

Easy to manage

False alarm because dinner was burning? You'll never have to worry about false alarm fines again since you can cancel them quickly from your Alarm.com app.

Unexpected activity? You'll know.

Most security systems stop paying attention once they're disarmed. Alarm.com stays on guard 24/7. Your system learns your home's activity patterns and alerts you to non-routine events with Unexpected Activity alerts.
